BIO-SEA[®] FISH

A natural, high analysis fish fertiliser containing amino acids, fatty acids, vitamins, macronutrients and a wide range of micronutrients that is found in any ocean-dwelling creatures.

Contains fish solids from deep water fish species that live in the crystal clear waters off the coast of NZ. High in protein, this fish product contains excellent levels of natural nitrogen, a broad spectrum of trace elements, and at least 19 separate, analysis-proven, amino acid compounds.

Our liquid fish fertiliser not only provides essential nutrients for robust plant growth and improved soil quality, but the delivery of this diverse range of amino acids works together in synergy to enhance nutrient absorption and overall plant health.

NASAA Organic Certified 3620M.
