AMINO-PLEX

HORTICULTURE

AMINO-PLEX

AminoPlex is a revolutionary Organic Nitrogen delivery technology that drives growth and increases the mineral density of your crop.

The form of nitrogen found in AminoPlex is an enzyme digestion of plant and marine materials which creates a highly efficient method of nitrogen delivery, containing highly plant available amino acids thus saving valuable energy that the plant can then put towards increased growth. AminoPlex increases the mineral density of the plant as the amino acids power the sugar development in the plant.

This all new technology is rich in organic nitrogen with a Nitrogen content of 10%. This represents a new dawn in Nitrogen fertilisation for organic producers. This fertiliser is natural product without any chemicals and is a solution based product.

AminoPlex can be applied in targeted applications to meet crop demand at any growth stage. By being able to split applications throughout the growing season, farmers can better manage crop risk.

Being a liquid fertiliser, AminoPlex can distribute nitrogen more evenly than solid fertilisers.

It can be applied with selected crop protection products to save time, labour, fuel and other machinery operating costs.

Amino Plex is also easy to use. It is a workable product suitable for liquid injection, boom spray for streaming nozzles or foliar application, and is available in a range of pack sizes.

APPLICATION RATES

Foliar

5-20 liters per hectare or as advised.

Fertigated

15-80 litres per hectare or as advised

Dilution Rate

1:20 or as advised

Store in a cool place away from sunlight. Stir well before use.

NASAA Organic Certified 3620M.

TYPICAL ANALYSIS

Major Elements	(w/v%)
Nitrogen	10.0%
Calcium	0.7%
Potassium	0.1%
