

HYBRID  AG

WETTING AGENTS

WETTER/ADJUVANT

MAGNIFY

WETTER/ADJUVANT

MAGNIFY

Magnify incorporates both anionic and non-ionic surfactants. The non-ionic surfactant helps to prevent foaming in the tank mix, which in turn saves time and reduces waste. Foaming can lead to delays and the loss of tank mix, whereas Magnify enhances the efficiency and promptness of refilling processes.

When plants absorb foliar nutrients or chemicals, they expend carbon, which could lead to a loss of energy. By adding a carbon source, Magnify compensates for this energy loss, facilitating a more efficient absorption of the chemistry by the plant.

For optimal results, including Magnify in all tank mixes is recommended. This practice minimises micronising and enhances droplet consistency, leading to better chemical compatibility and mixing. It also ensures more efficient mixing and refilling processes, as well as improved adherence, uptake by plants, and protection against washing off by rain, of the chemicals and nutrients applied to the plant.

APPLICATION RATES

200 mL /100 L (0.2%)

Store in a cool place away from sunlight
Stir well before use

TYPICAL ANALYSIS

Major Elements	%w/v
Proprietary Surfactants	40%
Fulvix	15%
Carbohydrates	4%
